

Ever Dear

“Every Moment is Precious”

What is a Memorial Diamond?

A memorial diamond is a special type of lab-grown diamond created to honour your beloved. It is a real diamond grown in the laboratory with cremated ashes or hair from human or pet.

Diamonds are composed of the element carbon with its atoms arranged in a crystal structure. To make memorial diamonds, carbon is extracted and purified from the cremated ashes or hair. The carbon is then exposed to High Pressure, High Temperature (HPHT), so that it melts and forms a tiny seed which starts to grow.

With the final memorial diamond, you can hold your loved one close again.

Model No. B2847

About EverDear™

EverDear™ memorial diamonds are the ultimate memorial jewellery infused with the memory of a loved one. Grown from carbon extracted from ashes or hair, it holds infinite continuance of comfort and remembrance.

As a U.S. based memorial diamond company that serves customers worldwide, EverDear™ firmly believes that peace of mind is one of the most important values when creating each diamond. Our scientists share the paramount mission of turning ashes or hair into diamonds that are certifiable and affordable.

We hope to make your delightful memories into brilliant everlasting diamonds. Your touching stories encourage and inspire us to constantly improve our technology and services.

Model No. E0959

Memorial diamonds are a unique way to treasure the remembrance of someone dear to the heart, be it a departed loved one, a newborn child, a beloved pet, or your dearest partner.

Model No. P3405

Our Advantages

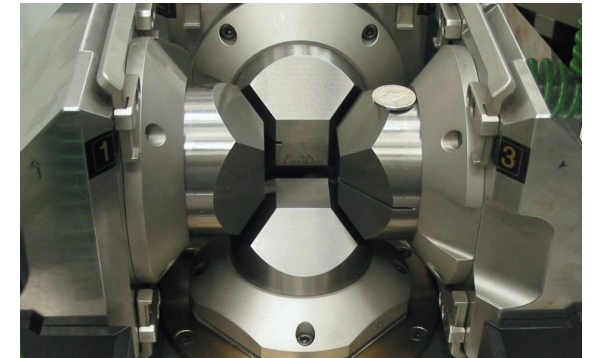

Production

We, at EverDear™, do all our research and scientific experiments in-house. These research projects help us to improve diamond quality & stability and enable us to personalise memorial diamonds in a shorter time frame and at a lower cost.

Innovation

EverDear™ values research and development (R&D) and recognises the importance of intellectual property protection. The detailed technical process and its applications are strictly safeguarded and maintained in absolute confidentiality.

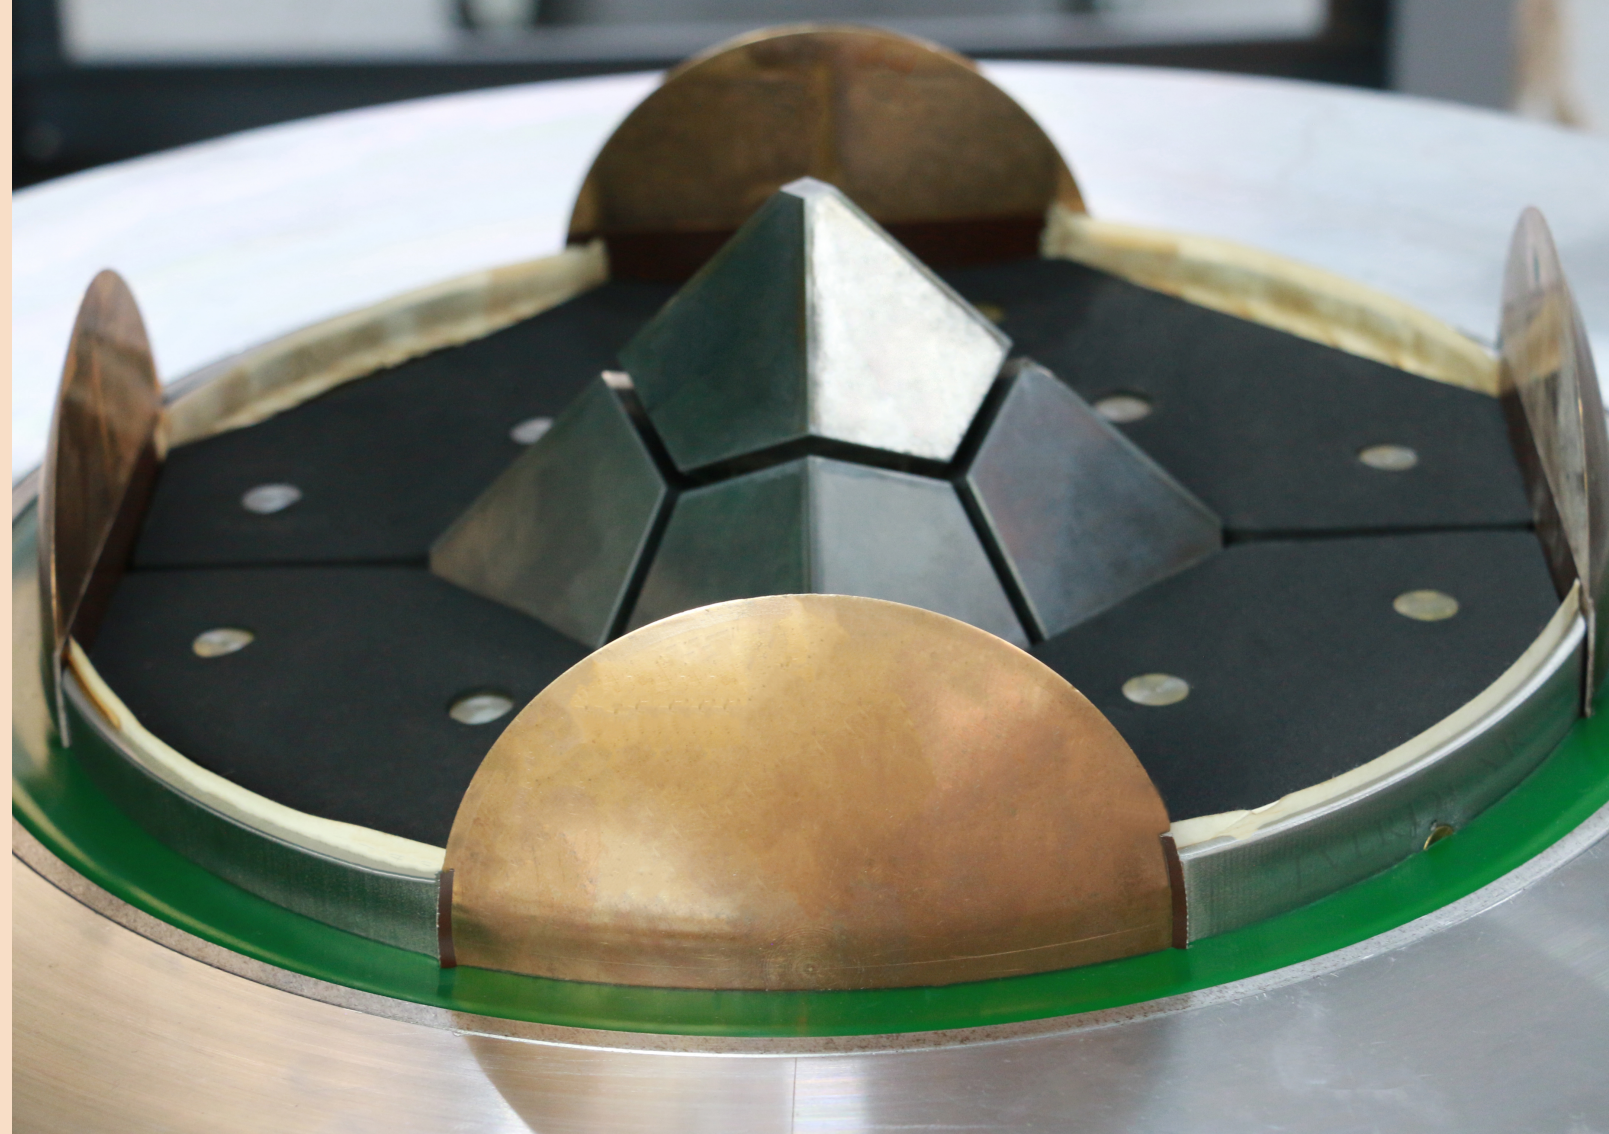

Technology

Carbon Refinement

Memorial diamonds are made from the carbon extracted from ashes or hair. The carbon content in everyone's hair or ashes is different, so the process and results are unique for each order. To make a memorial diamond at jewellery standard, these remains must be purified to an extremely high level.

The level to which the memorial diamond is processed defines the colour. A memorial diamond naturally has a yellow hue due to the presence of nitrogen within hair and ashes. Ashes or hair that have been completely purified result in colourless diamonds.

To extract these elements and isolate the carbon, EverDear™ laboratories process the hair and ash with heat in a vacuum environment and continue to purify it by hand through a refinement process.

Diamond Formation

A High Pressure, High Temperature (HPHT) press is used to artificially simulate the natural growing environment for the carbon to become a stunning memorial diamond.

To create the memorial diamond, a tiny diamond seed is prepared and placed at the bottom of the press' inner core cube. The interior of the press is heated to over 2000 °F, melting a catalyst metal. The molten catalyst metal dissolves the high-purity, personal carbon source, letting it bond to the diamond seed and take on its crystalline structure.

Cutting and Polishing

Once the diamond is out of the HPHT machine it is raw and uncut. This raw form, though beautiful in its own right, lacks the brilliance of a cut diamond. To start the journey from a diamond rough to a cut diamond, our expert artisans put each diamond through "crosswork," in which the main facets are placed on the diamond.

This ensures maximum weight, clarity, and the best angles for the specific diamond shape. Next, the diamond's main facets are smoothed. Lastly, the final facets are polished and the final form of the stunning diamond is complete.

Memorial Diamond 4Cs

Clarity

Clarity measures the tiny inclusions found in diamonds and is scaled from Flawless (FL) or Internally Flawless (IF) or Included (I1, I2, and I3).

Most EverDear™ memorial diamonds are between VS and VVS grade (Very and Very Very Slightly Included). This means no inclusions can be identified with the naked eye. Diamonds of larger sizes may have slightly more inclusions than the standard sizes.

Carat

As size increases, the price of a diamond increases drastically. A 1 carat diamond is 3 to 5 times the value of a half-carat diamond in today's market.

Different from mined diamonds, the exact size of a memorial diamond cannot be pre-determined. The creation time frame dictates a size range, but the final size may vary individually. Thus, we price our memorial diamonds by carat range rather than the exact size.

Colour

The natural colour of a memorial diamond is yellow due to the presence of other elements such as nitrogen in cremated ashes. A colourless memorial diamond is costlier than a yellow one as it requires additional purification.

Affected by the elements inside the ashes, the colour of every EverDear™ diamond is unique. When making memorial diamonds out of ashes or hair, the colours fall mostly between Fancy Light and Fancy Vivid.

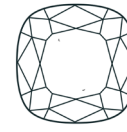

Cut

The cut of a diamond is the greatest influencer on the brilliance and sparkle of the stone. This factor refers to the quality of the diamond's proportions, symmetrical facets, and polish. The cut reflects the diamond's ability to transmit light and shine.

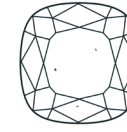

As one of the most impactful factors on the value of a diamond, the cut is crucial. With our leading technology every EverDear™ diamond is beautifully crafted for maximum brightness, fire, and scintillation.

Clarity

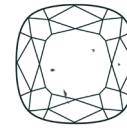

EverDear™ memorial diamonds exhibit exceptional clarity and make for a distinctive look when set in fine jewellery. Most EverDear™ memorial diamonds are between VS and VVS grade (Very and Very Very Slightly Included). This means no inclusions can be identified with the naked eye.

Diamond Colour

Yellow

With a hue reminiscent of the glowing sunshine, yellow is the most natural colour for memorial diamonds. Yellow diamonds are the most popular options as they are the result of the actual chemical composition of the ashes.

Green

Green is the colour of rebirth, growth, and new energy. The green diamond is another way to breathe life into the deceased. Like every branch of an evergreen tree that blooms in all seasons, the green memorial diamond will dazzle and shine forever.

Red

Red symbolizes passion and enthusiasm. It's as hot and dazzling as a campfire on a summer night. Wearing a red diamond brings warmth to your heart in your tough times. It will light up the dark path and show you the way when you are lost.

Blue

A blue diamond invokes calmness and tranquility. The same colour as the blissful cloudless sky, a blue diamond is not only in remembrance of your loved one, but also a piece of heaven. Your dearest love is at peace and will always be with you.

Pink

Representing innocent love and tender compassion, pink is an exceptionally elegant and feminine choice for your memorial diamond. The soft pink in your romantic diamond will reflect the memories of your loved one's blushed cheeks and rosy lips.

Colourless

Purity is the word to describe colourless diamonds. To turn ashes or hair into a colourless diamond, it requires extensive purification. The extracted carbon is purified from all other elements. Your beloved is reborn as a stunning and timeless diamond free from any impurities.

Black

Black can be sophisticated like the delicate flowing handwriting on a letter. It can be elegant like the understated black suit or dress at a ball. A black diamond expresses your deep condolences for your dearest love while giving you strength and power.

Certificates

International Gemological Institute (IGI)

The International Gemological Institute (IGI), founded in 1975 and headquartered in Antwerp, is a diamond, coloured stone, and jewellery certification organization. IGI has offices in New York City, Hong Kong, Mumbai, Bangkok, Tokyo, Dubai, Tel Aviv, Toronto, Los Angeles, Kolkata, New Delhi, Surat, Chennai, Thrissur, Ahmedabad, Shanghai, and Cavalese.

Gemological Institute of America (GIA)

The Gemological Institute of America (GIA), founded in 1931 and headquartered in California, is a non-profit institute dedicated to the research and education of gemology. The GIA sets and maintains the standards used to evaluate gemstone quality. It has offices, laboratories, and research centers in 13 countries around the world.

Personalisation

At EverDear™ we want to give you various options on how to customise your memorial diamonds. That is why we offer laser inscription for your stones. You can get up to 20 characters to be inscribed onto your memorial diamond. This could be anything from a personalised message to initials and dates.

Memorial Rings

There's always the classic solitaire diamond with 4 prongs, and if the mission is to dazzle and impress, a halo or pavé setting will most likely satiate your desires. When it comes to commemoration, every memorial diamond ring is unique. Our single diamond approach brings focus and dedication to the memory of your beloved. The refined and exquisite memorial diamond ring will last forever and hold infinite continuance of your remembrance.

AUTHENTICITY GUARANTEE

EverDear™ will issue a certificate of authenticity with your final product that includes a chemical analysis of the carbon material and the 4Cs of your diamond. We want you to treasure your memorial diamond with peace of mind and never have to doubt its authenticity.

Why We Offer the Best Price?

New Technology

Our new innovative U.S. technology enables our scientist to create diamonds from ashes or hair at a cheaper cost. The size of our HPHT machine is 1/3 of a Russian press, while providing 1000 °C higher temperature and 50 kbar higher pressure.

Direct Sales

EverDear™ does not sell via agents or distributors, which saves you from paying any commission.

The Value Behind

Our product is a genuine diamond with invaluable meaning and essence from your beloved. Our diamonds are produced and graded by our experts using the world's most advanced technology.

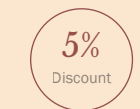

- Genuine Diamonds Graded by GIA
- Exceptional Brilliance from your Loved One
- Unique and Beautiful Colours

Testimonials

"My family and I have been struggling ever since our dearest son passed away knowing that he is still with us, transformed into a diamond, was the comfort that we needed. Thank you EverDear, for being with us through this difficult period every step of the way."

Massimo R.

"Thank you so much EverDear. Rocky was my best friend and the best dog a guy could ask for. He and I basically grew up together and we were inseparable. Wherever I went, he came with me. Now, he'll always be with me as a beautiful blue diamond."

Franky C.

"My husband and I were together for 42 years. It was only through EverDear that I can now remember him the way he deserves to be. I keep the diamond by my side all the time. It really feels like he is always here. Thank you for helping me through the tough times."

Sarah P.

"Thank you EverDear for this beautiful diamond. My mom's favorite colour is red, so I decided to treasure her forever with a red diamond. Seeing this red diamond I know that she would have been so pleased if she could see what she looks like now."

Maya V.

"Hi EverDear! My wife and I would like to express gratitude for the diamond made from our hair. Just like our diamond, we can be together forever. The diamond turned out more perfect than expected. Thank you for the great service!"

Michael A.

Order Instructions

Choose your diamond and jewellery, then pay a 50% deposit.

Pack and send the ashes or hair to our office under our guidance.

Wait for our scientists to grow your unique diamond in our lab.

Get diamond certifications and set your diamond in our crafted jewellery.

Receive a photo of the final piece and it will be delivered after full payment.
